Feedback From 2011 Course

We e-mailed all the delegates of our previous course and asked them to write to us with their exam results. All who e-mailed us back has passed the exam.

Your course was very good, though I think your questions were harder. Though the exam did not cover the epidemiology, screening I thought they were excellent sessions.

It was a well run course and excellnet value for money.

I would recommend it highly for anyone doing the exam.

Regards

The course had been extremely helpful for the exam and I am really thankful to you all.

It would have been even more useful if it was held a bit earlier as I realised I needed to do a lot to get there but did not have enough time left.

Any way I will let you know ones results are back as I feel I may have done a lot of silly mistakes.

I felt your course was good preparation and would recommend it to others. I'd suggest some questions on treating hyperparathyroidism in renal impairment.

Big thanks to you !!!!

I am a ...based in ... (got special interest in diabetes) attended your course and just now received the pass result -I have passed (1st attempt) . Many thanks for all you help and advice. It really helped.
